

Real-Time Quality Control and Communication

Floorcloud™ is a technology platform that enables contractors to monitor, communicate and store jobsite conditions and other essential data in real-time to improve installation outcomes for all project stakeholders.

Top Contractor Advantages:

1. Real-time, remote visibility to climate conditions
2. Alert notifications and graphs can be easily shared
3. Reduced time and expense spent traveling to and from jobsites to obtain manual readings
4. Send installation teams to jobsites that are truly ready for work to start
5. Monitoring material acclimation areas
6. Ability to easily capture and share photos and notes
7. Reduced time spent generating reports
8. No WiFi needed / easy to connect and disconnect sensors
9. Clean and intuitive user interface

Mobile and desktop connectivity

Ultimate project visibility

Instantly view & record detailed jobsite conditions across all of your projects before, during, and after installation.

Organize & store information

Capture & store important jobsite information (photos, notes, batch codes) in your secure, Floorcloud™ jobfile for future use.

Retrieve Job File information

Investigate past climate conditions and locate important notes, and photos by selecting calendar dates or more specific filtering criteria.

Generate reports

Quickly create and share detailed job site condition summary reports.

Avoid expensive re-work

Receive real-time alerts based on actual project data detected by our sensors when compared to product manufacturers' specifications.

Keep everyone informed

Easily share content, and maintain a permanent record of it, with any contact in your phone.

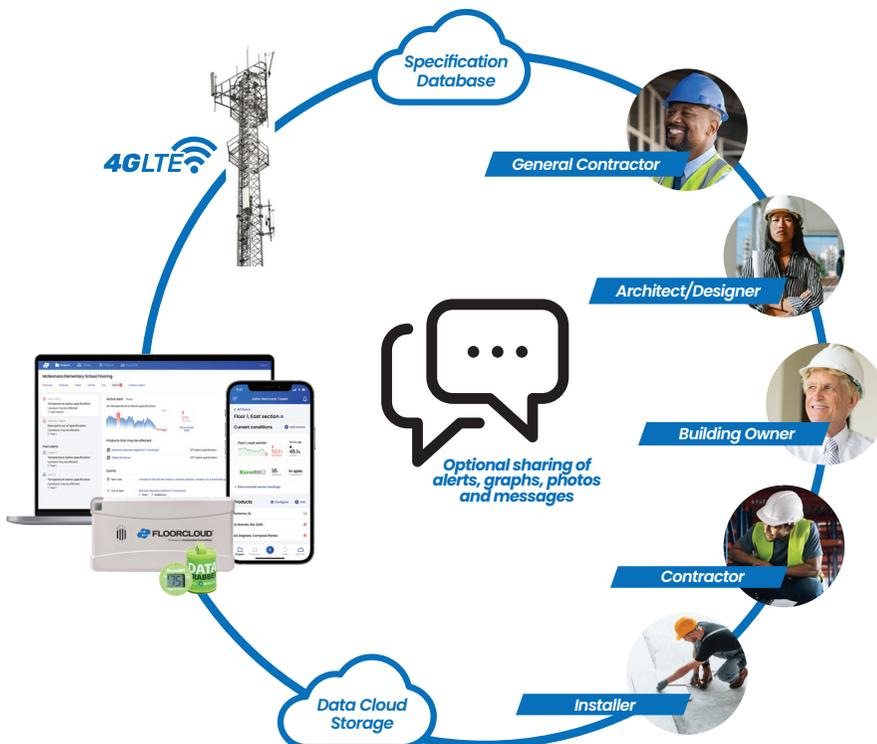

Create projects in advance

Set up project records, assign team members, add installation system products, and create tasks easily.

View active projects on map

Identify all project types and sensor status at a glance.

Get connected with the Floorcloud™ platform

How does Floorcloud™ work?

Floorcloud™ sensors monitor jobsite ambient climate conditions hourly, 24/7/365.

Temperature, humidity and dewpoint data is transmitted seamlessly to a proprietary cloud database via the cellular network for comparison against manufacturer's specifications.

Intuitive graphs and push notification alerts are easily viewed and shared using Floorcloud™ mobile and desktop applications.

Corrective actions can be taken proactively to help ensure successful project outcomes.

Manufacturers Specification Database

Real-time conditions comparison

Instantly access essential ambient temperature, humidity, and dew point specification data for thousands of flooring installation products.

Manufacturer tips

View helpful manufacturer installation and safety tips, as well as videos, for onsite personnel at point of use.

Store information securely

The Floorcloud™ database is a highly secure and organized digital vault, built with the most advanced AWS encryption technology. The same encryption technology is used by US Government agencies and many of the world's largest companies.

Specifications

Easily access manufacturers' product specifications from the Floorcloud™ database.

Floorcloud™ Manufacturer Verified™ Program

Instantly access essential specification data from thousands of flooring installation products.

Our CloudConnect™ service helps ensure the products you require are in our database. Submit your project's product list, and within 48 hours we will confirm your products are available to be selected.

Jobsite Conditions Sensors

1. Pre-configured: No Wi-Fi or password struggles
2. Out of the box connectivity to cellular IoT networks
3. Data tracking includes: Temperature, Humidity, Dew Point, and GPS location
4. 3 month battery life – Rechargeable by standard battery pack or 110v outlet
5. Serves as a data logger when not connected to cellular IoT network
6. IP67 rated for protection against dust and moisture
7. Device manufacturing meets TS16949, ISO13485, ISO 9001, ISO14001, OHSAA 18001, and BAPT PS340 certifications and standards.
8. Easily mouted with 3M double-sided tape, 3M command strips or self-adhesive magnetic strips.

Seamless connection to Wagner Meters

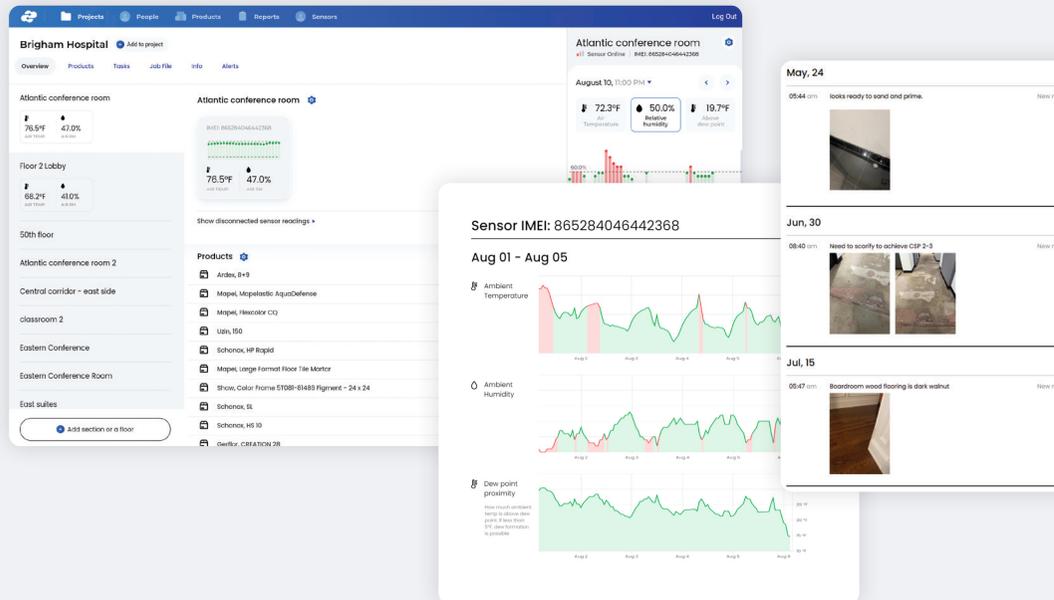

COMING SOON!

1. Read Wagner RapidRH® probe data within the Floorcloud™ app
2. Directly connect the FloorCloud™ app to Wagner Meters via Bluetooth® technology
3. Easily compare the data you collect to manufacturers specifications
4. Securely archive your data in the cloud

Customized Reports

- The Floorcloud™ desktop application enables users to create highly customized and professional, pdf reports within minutes.
- Each report can include summary graphs of ambient jobsite conditions, or any content captured in the project's job file.
- Reports can be saved or emailed to project stakeholders to enhance communication and professionalism.

For instructional videos and news...

The advantages of using a Floorcloud™ Authorized Contractor

- 1. Pre-installation monitoring** – Sensors can be installed on site to monitor and record ambient conditions prior to material shipments or installers arriving.
- 2. Acclimation conditions monitoring** – Sensors help ensure ambient conditions are maintained throughout acclimation periods.
- 3. Remote issue detection** – Identify if building controls have been turned off or on, or doors or windows have been left opened.
- 4. Photo and note documentation** – Easily capture, share, store and retrieve important jobsite information.
- 5. Warranty compliance** – Monitor and alert key stakeholders of out of specification conditions that could impact manufacturer's warranties.
- 6. Post-installation monitoring** – Ongoing, remote monitoring of real-time ambient conditions and automatic push notifications of out of specification conditions that could impact warranties.
- 7. Enhanced manufacturer connectivity** – Instant access to essential installation requirements and important manufacturer communications.

ABOUT FLOORCLOUD™

Floorcloud™ was founded by a team of construction industry veterans to better connect installers and manufacturers using mobile technology. Our goal is to help the industry improve jobsite quality assurance so that installations can be completed successfully, on schedule and within budget. Floorcloud™ is the only SaaS solution built specifically for the flooring industry using IoT sensor technology. Monitor, communicate and archive essential jobsite conditions and product data in real-time using our fully integrated solution.
